

Requirements Elicitation

Examine your project description that is available on Piazza.

This assignment is about requirements elicitation.

You will likely have questions regarding the requirements. Identify the issues that need clarification.

- Prepare a clear list of questions to be clarified by your customer.
- Initiate communication with your customer to discuss these questions.
- Document the preliminary requirements and your question related to elicitation on your project. Your requirements must be expressed clearly as software requirements.

Your questions and preliminary requirements should be placed on your project repository.

Don't forget to maintain your repo! As new content is added, you will want to reorganize the material. (The constant gardening approach...)
